

Training Title

ADVANCED RESERVOIR ENGINEERING & MANAGEMENT: Analysis (Rock and Fluid Properties), Characterization (Reservoir Drive Mechanisms) and Reservoir Management (Decline Curves & Enhanced Oil Recovery.)

Training Duration

5days

Training Venue and Dates

REF RM012	Advanced Reservoir Engineering & Management	5	25-29 Nov	\$6,000	London, UK
--------------	---	---	-----------	---------	------------

Training will be held at any of the 5 star hotels. Exact venue will be informed later.

Training Fees

- 6,000 US\$ per participant for Public Training includes Materials/Handouts, tea/coffee breaks, refreshments & Buffet Lunch

Training Certificate

Define Management Consultancy & Training Certificate of course completion will be issued to all attendees.

TRAINING DESCRIPTION

Oil Reservoirs have been created by complex sedimentary and diagenetic processes, and modified by a history of tectonic change. Reservoirs are complex systems on all scales. Decisions such as pumping and injection, new well placement, and drilling in an active oil field, are typical of the complex relationships between reservoir engineering and oil field/reservoir management. A reservoir's life begins with exploration that leads to discovery, which is followed by delineation of the reservoir, development of the field, production by primary, secondary, and tertiary means, and finally to abandonment. Integrated, sound reservoir management is the key to a successful operation throughout a reservoir's life. Further, the need to enhance recovery from the vast amount of remaining oil and gas-in-place, plus the global competition, requires better reservoir management practices. Reservoir engineering is the application of scientific principles to solve issues arising during the development and production of oil and gas reservoirs. This course covers the engineering operations involved in analysing the production behaviour of oil and gas wells, including well performance engineering, reservoir aspects of well performance, restricted flow into the wellbore, rate decline analysis, and fundamentals of artificial lift. This course is designed to provide many tools and techniques to help address the challenges of providing a more reliable and sound reservoir engineering & management. In addition to a wealth of classic information on the concepts and processes involved in reservoir engineering and management, the course presents insights about data acquisition, reservoir performance analysis & forecast, reservoir management economics and improved recovery processes. Further, the course is illustrated through a number of case studies, which will be shown to the participants to help them appreciate the concepts presented in the course.

OBJECTIVES

Upon the successful completion of the course, participants will be able to:-

- Become familiar with reservoir management, explain the integration of geoscience and engineering & know the reasons for integrating exploration and development technology
- Ensure the proper execution of the reservoir management process
- Illustrate the proper procedure for data acquisition, analysis and management which includes validation, storing, retrieval and application
- Explain the role of reservoir models as well as the importance of reservoir surveillance
- Apply the different methods of reservoir performance analysis and forecast & give emphasis on the integration of production/injection data, log data, pressure data and any subsurface data for analysis
- Provide details on the reservoir management economics, which includes economic criteria, scenarios, economic evaluation, risk and uncertainties
- Understand the improved recovery processes related to water flooding, thermal methods, chemical methods and EOR screening guidelines
- Implement reservoir management plans for newly discovered fields, secondary and EOR operated fields
- Plan the outlook and the next step & be ready with the current challenges and areas of further work for reservoir engineering and management

TRAINING METHODOLOGY

A highly interactive combination of lecture and discussion sessions will be managed to maximize the amount and quality of information, knowledge and experience transfer. The sessions will start by raising the most relevant questions, and motivate everybody finding the right answers. The attendants will also be encouraged to raise more of their own questions and to share developing the right answers using their own analysis and experience. All attendees receive a course manual as a reference.

This interactive training workshop includes the following training methodologies

- 30% Lectures
- 30% Workshops and work presentation
- 20% Group Work & Practical Exercises
- 20% Videos & General Discussions

www.definettraining.com

WHO SHOULD ATTEND

Engineers, geologists, geophysicists, field operation staffs, managers, government officials, and others involved with reservoirs.

COURSE OUTLINE

- Introduction to Reservoir Engineering
- Petrophysical properties of rocks
- Reservoir fluid properties
- Fluid flow through porous media

P.O BOX 45304 ABU DHABI U.A.E
T +971 2 626 4455 F +971 2 6275344
training@definettraining.com www.definettraining.com

- Reservoir performance prediction
- Concepts of pressure maintenance and EOR
- Reserve estimation – volumetric, MBE and decline curves
- Oil and gas field development
- Reservoir management
- Decision analysis and probability concept
- Reservoir management plan
- Reservoir drive mechanisms
- Estimation of reserves and prediction of reservoir performance
- Secondary recovery and pressure maintenance
- Introduction to enhanced oil recovery techniques
- Depreciation accounting in cash flow analysis
- Economic evaluation of oilfield development.

Case Studies, Discussions, Last Day Review & Assessments will be carried out.
