

Training Title

BENTLEY NEVADA COURSE: PREVENTIVE MAINTENANCE & CONDITION MONITORING, RBI, RCA, RCM METHODOLOGIES

Training Duration

5 days

Training Venue and Dates

REF MIO72	Bentley Nevada Course: Preventive Maintenance & Condition Monitoring, Rbi, Rca, Rcm Methodologies	5	22-26 April	\$4,250	Dubai, UAE
--------------	--	---	-------------	---------	------------

In any of the 5 star hotel. Exact venue will be informed upon confirmation.

Training Fees

- 4,250 US\$ per participant includes Training Materials/Handouts, Tea/Coffee breaks, Refreshments and International Buffet Lunch.

Training Certificate

Define Management Consultancy & Training Certificate of course completion will be issued to all attendees.

COURSE OVERVIEW

Maintenance of machinery and assets is a complex process in any industry regardless of its scope. Complexity of maintenance emerges from the variability of maintenance tasks, the impossibility of expecting most of the failures and hence the repair requests, and the variety and limitation of resources to be applied.

This course provides the basics and applications of maintenance techniques such as *Preventive Maintenance & Condition Monitoring, RBI, RCA, RCM* required for any successful maintenance program. The main purpose of this training course is to provide the trainees with the effective ways for good understanding and consequent control of maintenance process.

TRAINING OBJECTIVES

www.definetraining.com

- List the maintenance types
- Explain the main concepts of preventive maintenance
- Discuss the techniques of condition monitoring.
- Learn the basic concepts of vibration.
- List the various instruments to measure vibration.
- Explain the steps of machinery vibration analysis.
- Discuss the functions of Risk-Based Inspection
- Explain the applications of Reliability centered Maintenance (RCM)
- Explain the procedure applied in Root Cause Analysis (RCA)

WHO SHOULD ATTEND?

- Engineers
- Senior Engineers
- Supervisors

TRAINING METHODOLOGY:

A highly interactive combination of lectures and discussion sessions will be managed to maximize the amount and quality of information and knowledge transfer. The sessions will start by raising the most relevant questions, and motivate everybody find the right answers. You will also be encouraged to raise your own questions and to share in the development of the right answers using your own analysis and experiences. Tests of multiple-choice type will be made available on daily basis to examine the effectiveness of delivering the course.

Very useful Course Materials will be given.

- 30% Lectures
- 30% Workshops and work presentation
- 20% Group Work & Practical Exercises
- 20% Videos & General Discussions

COURSE OUTLINE

Day 1

Techniques

Equipment Failure

How Equipment Fails

Six patterns of component failure rate over life

Causes of failure

Failure Rate Bathtub Curve

Failure Rate Changes over operational life Stages

Where to Start: Equipment Criticality Or Risk

Reliability Centered Maintenance (RCM) Overview

Failure Analysis - Closing The Loop

Root Cause Failure Analysis (RCFA)

Failure Hierarchies

www.definettraining.com

FMEA & FMECA

Introduction

Purpose and objectives of the analysis

Failure modes and effects analysis

General considerations

Preliminary tasks

Benefits of FMEA

Summary of procedures for FMEA

Building a system for equipment condition indicating

a) Equipment data

b) Failure data

P.O BOX 45304 ABU DHABI U.A.E

training@definettraining.com www.definettraining.com

- c) Maintenance data
- d) Data format

www.definettraining.com

P.O BOX 45304 ABU DHABI U.A.E
T +971 2 626 4455 F +971 2 6275344
training@definettraining.com www.definettraining.com

Failure and maintenance notations
Failure descriptors
Failure causes
Method of detection

Day2

Preventive maintenance methodologies
PM planning and scheduling
Set up the PM plan
Strategic Reliability
Reliability Engineering
Reliability basics
Reliability prediction
Reliability assessment
Life cycle assessment
FMEA & FMECA
Principles of RBI (risk based inspection),
RCA (root cause analysis)
Reliability Maintenance
Strategies
CBM, RBM, RCM & PdM
CMMS
Maintenance roles & responsibilities

Day 3

USING PREDICTIVE MAINTENANCE.

Vibration Analysis
Introduction to Vibration Analysis
Frequency Analysis and the Fast Fourier Transform
Vibration Transducers
Basic Failure Mechanisms with examples
Vibration Standards and Alarm Levels
Vibration Diagnostics
Amplitude Demodulation – aka Enveloping, SSE, HFD, Peak-Vue
Vibration on Rolling Element Bearings
Resonance – identification & cure

Other Predictive Maintenance Techniques

Infrared Thermography
Thermographic applications
Passive Ultrasonics - contact and non-contact
Ultrasonic Applications
Tribology – oil analysis

NOTE:

Pre & Post Tests will be conducted

Case Studies, Group Exercises, Group Discussions, Last Day Review & Assessments will be carried out.
