

**Training Title**

**CENTRIFUGAL COMPRESSORS & STEAM TURBINES**

**Training Duration**

5 days

**Training Dates & Venue**

REF ME039	Centrifugal Compressors & Steam Turbines	5	26 – 30 Aug '18	\$4,250	Dubai, UAE
--------------	------------------------------------------	---	-----------------	---------	------------

In any of the 5 star hotel. Exact venue will be informed soon.

**Training Fees**

- 4,250 US\$ per participant for Public Training including Course Materials/Handouts, Tea/Coffee, Refreshments & International Buffet Lunch
- Training will be held at any 5 Star Hotels

**Training Certificate**

Define Management Consultancy & Training Certificate of course completion will be issued to all attendees.

**COURSE OVERVIEW**

**INTRODUCTION**

This seminar entails a study of gas compression and expansion laws applied to industrial processes followed by an illustration of the different types of rotating machines usually encountered in plants, and their related aspects. The aim is to provide a satisfactory approach to the problems posed by compressors and turbines and the means to solve them.

Key Highlights of the course are:

- Understanding of monitoring techniques as applied to compressors and turbines.
- Ability to put in place measures to quantify equipment condition.
- Interface with and control service providers.
- Identify and specify new compressor and turbine plant.

**OBJECTIVES**

At the end of this seminar participants will have:

- An understanding of the construction and operational constraints of centrifugal compressors and steam turbines.
- Knowledge of how to optimally maintain the equipment for the benefit of the company
- Hints and Tips for practical application of monitoring technologies so as to achieve the best results.

**WHO SHOULD ATTEND?**

- Engineers, Operators, and Technicians in Maintenance, Engineering and Production.
- Anyone who wishes to update themselves on Maintenance Engineering Technologies, judge the suitability of these technologies for their needs, and learn how to implement them for the benefit of their organizations.

**TRAINING METHODOLOGY:**

A highly interactive combination of lectures and discussion sessions will be managed to maximize the amount and quality of information and knowledge transfer. The sessions will start by raising the most relevant questions, and motivate everybody find the right answers. You will also be encouraged to raise your own questions and to share in the development of the right answers using your own analysis and experiences. Tests of multiple-choice type will be made available on daily basis to examine the effectiveness of delivering the course.

Very useful Course Materials will be given.

- 30% Lectures
- 30% Workshops and work presentation
- 20% Group Work & Practical Exercises
- 20% Videos & General Discussions

**CONTENTS:**

**Day 1:**

<b>COMPRESSORS</b>
<b>Introduction to Compressor Types:</b> Centrifugal; Axial; Reciprocating; Helical Screw; Ranges of Application and Limitations
<b>Positive displacement compressors</b> Reciprocating; Rotating;
<b>Mechanical Design of Centrifugal Compressors:</b> Compressor Side Streams, Rotors, Balancing, Rotor Dynamics, Impellers, Casings
<b>Mechanical Design of Centrifugal Compressors (continued):</b> Bearings, Seals, Couplings, Controls

**Day 2:**

<b>Basic Compressor Parameters:</b> Thermodynamics; Capacity; Power; Efficiencies; Gas Properties; Intercooling
--------------------------------------------------------------------------------------------------------------------

<b>Axial and Radial Thrust:</b> Axial thrust and methods of balance Radial thrust and its effect
<b>Selection of Centrifugal Process Compressors:</b> Calculation Methods, Characteristic Curves; Stability
<b>Surge in Centrifugal Compressors</b> Method of controlling surge
<b>Lubrication and sealing systems:</b>

**Day 3:**

<b>Compressor Inspection, Maintenance:</b>
<b>STEAM TURBINES</b>
<b>Steam generation</b> Energy, matter and fuel
<b>Boilers:</b> Sensible and latent heat, superheating
<b>Steam Turbines</b> Operating Principles, Impulse Turbines, Reaction Turbines
<b>Steam Turbines (Continued):</b> Application Ranges, Configurations, Application Constraints
<b>Turbine Components:</b> Turbine Rotors, Blading, Diaphragms, Nozzles, Steam Chests, Glands and Gland Systems, Bearings

**Day 4:**

<b>Turbine Components (Continued):</b> Balancing, Rotor Dynamics, Governing Systems, Lube Oil Management
<b>Overview of Selection and Sizing of Steam Turbines for Reliability:</b> Thermodynamics, Steam (Water) Rates, Condensing and Backpressure Turbines, Single and Multistage Types, Process Considerations
<b>Operation and Maintenance of Steam Turbines:</b> Commissioning, Startup, Run-In and Shut-down and Surveillance
<b>Operation and Maintenance of Steam Turbines (Continued):</b> Steam Turbine Inspection, Maintenance, Overhaul and Repair

**Day 5:**

<b>Cycles:</b> Carnot cycle, regenerative cycle, Brayton
<b>Predictive vs. Preventive Maintenance Techniques:</b> Determination of Which Method to Use
<b>Machinery Reliability Audits and Reviews:</b> Overview; Reliability Impact on Plants

Written Test (Optional)

Presentation of Certificates

Case Studies, Discussions and Last Day Assessments will be carried out.
