Define Management Consultancy & Training Certificate of course completion will be issued to all attendees.

INTRODUCTION & DESCRIPTION

The pipeline networks expanded rapidly all over the world when it became apparent that pipelines are an efficient, economic way to move oil, gas, and petroleum products to consumers. More challenges face the pipeline industry. So, good understanding of pipeline design, maintenance and rehabilitation will help tackling these challenges.

Although pipelines are protected by many methods such as coating and cathodic protection, pipe failures are likely to take place. Various methods are used to repair defected pipelines such as pipe clamp, clock spring or pipe replacement.

This course deals with the design, maintenance and rehabilitation of pipeline systems. An overview of pipeline industry is discussed. Participants will have acquire and/or consolidate the essential knowledge and skills to design, maintain and repair pipelines.

WHO SHOULD ATTEND?

Managers, engineers, operators, supervisors, inspectors, equipment suppliers, or those who wish to be familiar with pipeline systems.

TRAINING METHODOLOGY:

A highly interactive combination of lectures and discussion sessions will be managed to maximize the amount and quality of information and knowledge transfer. The sessions will start by raising the most relevant questions, and motivate everybody find the right answers. You will also be encouraged to raise your own questions and to share in the development of the right answers using your own analysis and experiences. Tests of multiple-choice type will be made available on daily basis to examine the effectiveness of delivering the course.

All presentations are made in excellent way. Very useful Course Materials will be given.

DMCT/OL/9/18(Rev3Dt:23/9/18)
