

**Training Title :**

**PIPELINE CORROSION INTEGRITY MANAGEMENT (PCIM)**

**Training Certificate**

Define Management Consultancy & Training Certificate of course completion will be issued to all attendees.

**Training Venue and Dates**

REF WC010	Pipeline Corrosion Integrity Management (PCIM)	5	20-24 January, 2019	\$4,000	Dubai, UAE
--------------	------------------------------------------------	---	------------------------	---------	------------

In any of the 5 star hotels. The exact venue will be intimated once finalized.

**Training Fees**

4,000 US\$ per participant for Public Training. Fees Includes Course Materials/Handouts, Tea/Coffee, refreshments, International Buffet Lunch.

**TRAINING OVERVIEW**

**TRAINING DESCRIPTION**

Pipeline is the most reliable, efficient, safe and economic mode of transport for oil, gas, hydrocarbons and water. Pipeline corrosion can result in huge monetary losses and create safety hazards for people, assets and environment. Hence, Corrosion control is an important facet for ensuring integrity of the pipelines. PCIM needs to be followed to ensure safety and reliability of the oil and gas pipelines through a foundation of corrosion control, inspection, assessment, mitigation and communication. This course covers various aspects of corrosion of pipelines, methods available for prevention and cost effective life extension of existing pipeline while maintaining adequate safeguards for human life and the environment.

**TRAINING OBJECTIVES**

The aim of the course is to provide attendees with a common awareness of Pipeline Integrity Management and also the tools and techniques for producing integrity management plans. At the end of the course trainees should be able to:

- Understand how pipeline data is integrated and gathered in database structures;
- Identify the key pipeline degradation mechanisms and threats to pipeline integrity;
- Understand the principles of risk assessment and be able to conduct a simple risk assessment;
- Develop simple Pipeline Integrity Management plans;
- Select and apply appropriate inspection and assessment criteria for pipeline defects;
- Recommend appropriate Non Destructive Testing and repair methods for pipeline defects;
- Appreciate the industry software available for the management of pipeline integrity;

**TRAINING METHODOLOGY**

A highly interactive combination of lectures and discussion sessions will be managed to maximize the amount and quality of information and knowledge transfer. The sessions will start by raising the most relevant questions, and motivate everybody find the right answers. The delegates will

*DMCT/OL/9/18(Rev3Dt:23/9/18)*

also be encouraged to raise their own questions and to share in the development of the right answers using their own analysis and experiences.

- 30% Lectures
- 30% Workshops and work presentation
- 20% Group Work& Practical Exercises
- 20% Videos& General Discussions

### WHO SHOULD ATTEND?

The course is suggested for Electrical Engineers

1. Electrical Technicians
2. Power System Engineers
3. Electrical Engineers
4. Consulting Engineers
5. Project Engineers
6. Power System Technicians
7. Electrical Contractors

### TRAINING OUTCOME

After completion of the course the participants will be able to:

- Understand the total structural integrity of process plant piping systems throughout their useful life
- Discover how the ASME B31.3 code has been correctly and incorrectly applied.
- Ensure the total structural integrity of process plant piping systems throughout their useful life.
- Discuss and apply the design requirements of the ASME B 31.3 Code.
- Achieve higher levels of maintenance excellence in refineries and other process plants.
- Examine and apply the maintenance and inspection requirements of API 570 to process plant piping systems.

### DAILY OUTLINE

#### Day One

- Section one - Pipelines systems
- Section two- Pipeline hazardous and toxic services
- Section three - Impact of corrosion of pipelines
- Section four - Pipeline system failures
- Section five - Hazard identifications
- Section six - Pipeline safety

#### Day Two

- Section seven - Pipeline integrity management
- Section eight - Regulations
- Section nine- Implementing codes and standards

*DMCT/OL/9/18(Rev3Dt:23/9/18)*

Section ten - Defects & Threats  
Section eleven - High Consequences Areas  
Section twelve - Hazard identifications

**Day Three**

Section thirteen - Pipeline failure rates  
Section fourteen - Failure mode analysis  
Section fifteen - Failure consequences  
Section sixteen - Risk assessments  
Section seventeen - Assessment intervals

**Day Four**

Section eighteen - Baseline assessment plan  
Section nineteen - Integrity assessment  
Section twenty - Corrosion Monitoring  
Section twenty one - Fitness for purpose

**Day Five**

Section twenty two - Responses and mitigations  
Section twenty three - Repair methods  
Section twenty four - Assessment of remaining strength  
Section twenty five - Pipeline integrity management program (PIMP)  
Section twenty six - Incident investigation  
Section twenty seven - Continual improvement

Case studies

Videos

**NOTE:**

**Pre & Post Tests will be conducted**  
**Case Studies, Group Exercises, Group Discussions, Last Day Review & Assessments will be carried out.**
