

Training Title

PUMPS OPERATION & MAINTENANCE & PERFORMANCE IN POWER

Training Duration

5 days

Training Dates & Venue

REF	Pumps Operation & Maintenance &	5	14-18 June		
ME034	Performance in Power		2021	\$6,500	London, UK

Training will be held at any of the 5 star hotels. The exact venue will be informed once finalized.

Training Fees

- 6,500 US\$ per participant for Public Training includes Materials/Handouts, tea/coffee breaks, refreshments & Buffet Lunch

Training Certificate

Define Management Consultancy & Training Certificate of course completion will be issued to all attendees.

TRAINING OVERVIEW

TRAINING DESCRIPTION

Pumps are versatile and important fluid machine that almost found in all engineering processes and applications. There are two main types of pumps; namely positive displacement and rotodynamic pumps. The first type may be classified as reciprocating and rotating pumps. Piston, plunger and diaphragm pumps represent the reciprocating pumps, while gear, screw lobe and sliding vane pumps represent the rotating pumps. The second type, namely the rotodynamic pumps may be centrifugal pumps, mixed-flow pumps and axial-flow pumps.

Without pumps there would no flow in pipes, tubes, conduits or equipment. Pumps create the pressure or head required to overcome friction loss due to flow and losses due to change in magnitude or direction of the flow as well as any shock losses. Also, pumps charge the fluid by the head to overcome gravity and increase the fluid potential energy. Mechanical seals play an important role in pumps to prevent leakage. A mechanical seal must contain four functional components primary sealing surfaces, secondary sealing surfaces, a means of actuation and a means of drive.

TRAINING OBJECTIVES

The basic and advanced pump technology is required to:

- Differentiate between different types of pumps
- Know and recognize the pump component and structure
- Help learning how to operate successfully the pump

DMCT/OL/9/18(Rev3Dt:23/9/18)

- To diagnose the problems of operation as cavitation causes and overcoming these causes.
- Understand the causes of axial and radial thrust in pumps
- Successfully select, troubleshoot and maintain pumping equipment.

WHO SHOULD ATTEND?

This course is designed for:

- Operators, and maintenance groups
- Engineers and supervisors as well as those in the design of piping systems
- Responsible engineers for purchasing and commissioning pumps

TRAINING METHODOLOGY

A highly interactive combination of lectures and discussion sessions will be managed to maximize the amount and quality of information and knowledge transfer. The sessions will start by raising the most relevant questions, and motivate everybody find the right answers. You will also be encouraged to raise your own questions and to share in the development of the right answers using your own analysis and experiences. Tests of multiple-choice type will be made available on daily basis to examine the effectiveness of delivering the course. Very useful Course Materials will be given.

- 30% Lectures
- 30% Workshops and work presentation
- 20% Group Work & Practical Exercises
- 20% Videos & General Discussions

DAILY OUTLINE

COURSE CONTENTS:

- 1- Introductory & Review of Fluid Mechanics and Fluid Machines
- 2- Pump Types and Specifications
- 3- Centrifugal Pump Performance
- 4- Performance Deterioration
- 5- Sealing Systems
- 6- Series and Parallel Connections
- 7- Centrifugal Pump Priming.
- 8- Pump Cavitation.
- 9- Axial and Radial Thrust.
- 10- Pump Operation and Maintenance and Troubleshooting.

DETAILED DAILY PLAN

Day One:

- 1- Some fluid properties and pressure concept

DMCT/OL/9/18(Rev3Dt:23/9/18)

- Velocity, density, viscosity, specific gravity, volume and mass flowrate
- Gauge and absolute pressure

2- Pump Types and Specifications

- Rotodynamic Pumps.

i. Types of Rotodynamic Pumps

ii. Pump Impellers

iii. Pump Casings

- Positive Displacement Pumps (PDPs)

i. Reciprocating Positive Displacement Pumps

ii. Rotary Positive Displacement Pumps

Day Two:

3- Centrifugal Pump Performance

- Determination of Pump Performance by Testing
- Pump Static and Dynamic Heads.
- Pump Break Power
- Pump Efficiency
- Affinity Laws

4- Centrifugal Pump Design and Technology

- Pump Specific Speed
- Charts Between Specific Speed and Best Efficiency

Day Three:

5- Performance Deterioration

- Deterioration of pipe System Curve
- Deterioration of pump Components

Day Four:

6- Series and Parallel Connections

- Series Operation
- Parallel Operation

7- Centrifugal Pump Priming.

- System of Foot Valve Strainers and Filling Funnel and Vent
- Priming Tank
- System of Evacuating the Pump and Suction Line

8- Pump Cavitation.

- Vapor Pressure of a Liquid
- Calculation of (NPSH)_a of a Pumping Unit
- Determination of (NPSH)_r of a Pump
- Relation of (NPSH)_a and (NPSH)_r

Day Five:

DMCT/OL/9/18(Rev3Dt:23/9/18)

9- Axial and Radial Thrust.

- Axial Thrust and Methods of its Elimination or reduction
- Radial thrust and Methods of its Elimination or reduction

10- Pump Operation and Maintenance and Troubleshooting.

11- Sealing Systems

- Types of Leak
- Labyrinth and Stuffing Box
- Mechanical Shaft Seals

NOTE:

Pre & Post Tests will be conducted

Case Studies, Group Exercises, Group Discussions, Last Day Review & Assessments will be carried out.
