TRAINING OVERVIEW

TRAINING INTRODUCTION:

Rapid industrialization in the 20th century has seen tremendous growth in the movement of Petroleum products and other flammable and toxic Chemicals throughout the Globe. Besides, Liberalization, Privatization, and Globalization have wreaked havoc in the form of environmental pollution, and safety & health hazards.

TRAINING DESCRIPTION

The storage and safe handling of chemicals and hazardous materials require compliance with a complex array of regulations and the use of specialized technical facilities, operations, and equipment to ensure safe and proper management. This course provides a practical method of assessing the properties of chemicals and tracks the legislative framework that surrounds the safe management of these materials.

This course also provides practical guidelines for the identification, segregation, and movement of chemicals, as well as methods for the evaluation of facilities and specialized equipment necessary for the safe and effective storage and transfer of hazardous chemicals.

DMCT/OL/9/18(Rev3Dt:23/9/18)

TRAINING OBJECTIVES:

The course will provide expert advice aimed at reducing potential hazards and either removing risks or minimizing the potential consequences in the event of an incident.

It will develop and provide a practical guideline for the evaluation and general design of operations used for the safe and effective storage and handling of chemicals.

- It will cover a range of industrial scenarios. These practical case studies and exercises will provide the participants with the necessary knowledge and guides for the right and safe handling of chemicals in petroleum sites.

WHO SHOULD ATTEND?

All site staff handling chemicals.

Material managers and facility operators who store or handle chemicals, Engineers with limited knowledge of chemicals and their properties, construction site managers, engineers, and architects responsible for the design of facilities for hazardous materials management, personnel responsible for implementing training programs and methods for hazardous chemicals, managers wishing to ensure compliance with applicable legislation and a reduction of risk for hazardous chemicals management, and safety personnel plus other people whose position in the company requires them to acquire this knowledge.

TRAINING METHODOLOGY:

A highly interactive combination of lectures and discussion sessions will be managed to maximize the amount and quality of information and knowledge transfer. The sessions will start by raising the most relevant questions and motivating everybody to find the right answers. You will also be encouraged to raise your questions and to share in the development of the right answers using your analysis and experiences. Tests of multiple-choice type will be made available daily to examine the effectiveness of delivering the course.

Very useful Course Materials will be given.
